

Flexible Connectivity

Port pairs auto-negotiate full-speed connections upstream to computers and downstream to peripherals

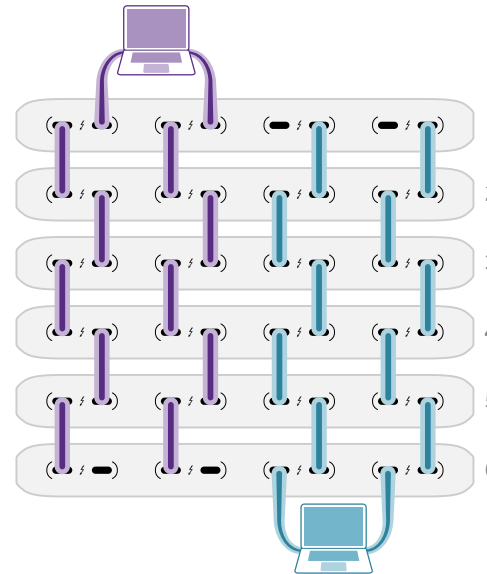

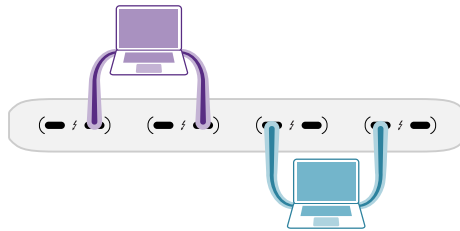

Streamlined Workgroups

Connect up to four computers simultaneously for a collaborative workflow using Storage Handoff

Ultimate Throughput

Two computers, each multipathed to achieve maximum performance

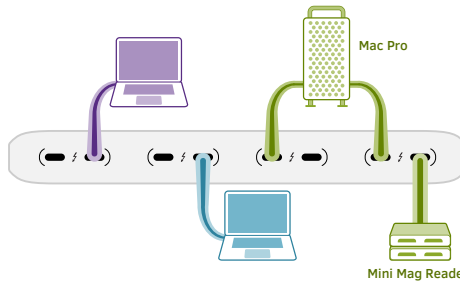

Massive Expansion

Single or multipath daisy chains can expand capacity up to six Pro Data devices while providing optimal connectivity and speed

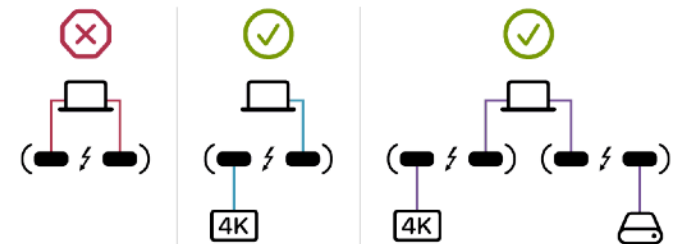

Offline Automation

Delegate time-intensive tasks like data ingest and rendering for increased efficiency

Multipath Cabling

Each pair () of ports should have only one upstream connection to a computer. Use separate pairs for multipathing.

NOTE: All devices and connections shown are Thunderbolt. Consult your documentation for USB peripherals, as they may require a Thunderbolt dock for power and/or to be recognized by the host computer
